MW Pulsed Neutron and Muon Source Facility at J-PARC

Y. Ikeda

Materials and Life Science Division, J-PARC Center, Tokai-Mura, Ibaraki 319-1195, Japan

The Materials and Life Science Experimental Facility at J-PARC (Japanese Proton Accelerator Research Complex) has started commissioning with 3GeV proton beam injection after 7 years facility construction. The first neutron production was recorded on May 30th, 2008, and the first muon beam will be ready for extraction in coming September. This talk gives an overview of the facility concept and important milestones toward the goal of project. Along with, as the operation for initial user program is scheduled to start in coming December, the general policy of the user access will be introduced.
